

Guia de atualização nos testes

/repositories/ProductRepositoryTests.java

1. Remover teste para id inexistente:

```
@Test
public void deleteShouldThrowEmptyResultDataAccessExceptionWhenIdDoesNotExist() {

    Assertions.assertThrows(EmptyResultDataAccessException.class, () -> {
        repository.deleteById(nonExistingId);
    });
}
```

/services/ProductServiceTests.java

1. Incluir mocks para existsById:

```
Mockito.when(repository.existsById(existingId)).thenReturn(true);
Mockito.when(repository.existsById(nonExistingId)).thenReturn(false);
Mockito.when(repository.existsById(dependentId)).thenReturn(true);
```

2. Remover mock da EmptyResultDataAccessException:

```
Mockito.doThrow(EmptyResultDataAccessException.class)
    .when(repository).deleteById(nonExistingId);
```

3. Remover verify do teste de delete para id não existente:

```
@Test
public void deleteShouldThrowResourceNotFoundExceptionWhenIdDoesNotExist() {

    Assertions.assertThrows(ResourceNotFoundException.class, () -> {
        service.delete(nonExistingId);
    });

    Mockito.verify(repository, times(1)).deleteById(nonExistingId);
}
```
